## D d 3.5 complete character sheets

Daria-Yakovleva/Pixabay Some candy that starts with the letter “D” include Dum Dums lollipops, Dove chocolates, Dots, Daim bars, Dairy Milk by Cadbury, Dagoba organic chocolate, divinity, Dip Dabs, and Dew Drops. Some consider gum to be candy. Dubble Bubble, Dentyne, and Doublemint are all types of gum that start with the letter “D.” One of the most popular lollipop brands in the United States, Dum Dums date back to 1924, when the Akron Candy Co. in Ohio created them for kids. Spangler Candy purchased the company a few decades later in 1953, and it still makes them today. Dum DumsDove Dove is one of the most popular brands of chocolate candy in the U.S., thanks to the ice cream truck. In 1939, a man named Leo Stefanos felt it was unsafe for his children to chase the truck down the street, so he made his own ice cream bars and began selling them in the Chicago area. Years later, in 1986, Mars bought the Dove company, and today, it produces several assorted chocolate candies and candy bars in addition to ice cream bars. DotsDots, the movie theater gum drop staple, dates back to 1945. Today, the Tootsie company produces more than 4 billion each year. Original flavors include cherry, orange, strawberry, lemon, and lime. Tropical and sour flavors are also available. Daim BarsDaim bars are made in Sweden, but they’ve become popular in the U.S. because they’re sold in IKEA stores. Each bar is made up of almond-flavored toffee and covered in chocolate, similar to a Heath bar. Dairy Milk Dairy Milk is a type of chocolate candy bar produced by Cadbury. It’s available in several flavors, such as English toffee, fruit and nut candy, roast almond, caramello, and milk chocolate. Today, Cadbury is owned by Mondelez International. Behind Mars, it’s the second-largest candy company in the world. DagobaDagoba is a brand of organic chocolate that produces drinking chocolate, baking products, and chocolate candy bars. Bars are available in two flavors: rich dark and extra dark, and all of the company’s chocolate is sourced carefully so that it doesn’t harm the environment. The company also works to empower women and fight against food allergies. Divinity Made from egg whites, corn syrup and sugar, divinity candy — both homemade and commercially produced — dates back to the early 20th century. The earliest known recipes are dated 1907 and 1915. Many famous chefs have their own recipes today, but no matter who makes it, the result is a nougat-like candy. Some people opt to add nuts and dried fruit to it. Dip DabsDip Dabs is an old-fashioned British favorite that was produced by Barrat. Today, it’s produced by Tangerine Confectionery. The candy is a powdered sherbet with a lollipop inside that you can dip into the powder and lick it off. Dew Drops Dew Drops are old-fashioned fruity candies with a sugary coating. They’re shaped like gumdrops and have a gel-like texture. Produced by multiple companies, they’re typically sold in bulk in candy stores today. MORE FROM REFERENCE.COM Photo Courtesy: Justin Page/DigitalVision/Getty Images Vitamin D is important for maintaining a healthy body, primarily because it helps you fully maximize your body’s absorption and utilization of calcium, an important mineral that we all need. When paired with calcium, vitamin D helps regulate bone remodeling and growth, ensuring healthy, strong bones. Vitamin D can also help protect older adults from osteoporosis, which occurs due to excess bone loss from aging. Furthermore, this nutrient boosts your immune system and reduces inflammation within your body, potentially warding off future medical conditions in the process. It also plays a vital role in cell growth, neuromuscular functions and protein encoding. Studies have shown that a regular, healthy vitamin D intake can also serve as an antidepressant and make people feel generally happier. But that’s not all you’ll want to know about vitamin D.Sources of Vitamin DVitamin D is naturally found in certain foods and now appears in many more foods that have been fortified with added nutrients. The best sources of naturally occurring vitamin D are oily fish such as salmon, tuna, cod, sardines and mackerel. Fish liver oils are another good source of vitamin D. Small amounts of the nutrient are present in beef liver, cheese, egg yolks and mushrooms. Photo Courtesy: Alexander Spataro/Moment/Getty Images Commonly, vitamin D-fortified foods include whole milk, orange juice, margarine and breakfast cereals. It’s important to look at the label and nutrition facts to verify that vitamin D is in a particular food you’re considering. Because dairy products are often fortified with vitamin D, lactose intolerant or vegan individuals should keep an eye on their diets to ensure they get enough of the vitamin. Sun exposure is another method of naturally obtaining vitamin D, as our bodies can create their own vitamin D upon exposure to ultraviolet (UV) rays from the sun. However, it’s difficult to gauge exactly how much sun exposure can generate sufficient vitamin D, as overexposure can be harmful, too. UV rays are also known to trigger free radicals, which can lead to skin cancer if left unchecked. It’s been suggested that getting approximately 15 minutes of sun exposure between 10 a.m. and 3 p.m. at least twice a week to your face, arms, legs or back will help your body synthesize enough vitamin D. It’s important to note that you can’t cover the exposed area of your body with sunscreen if you choose to get vitamin D naturally. The SPF blocks UV rays and can hinder your body’s ability to create vitamin D. If you’re in the shade or behind a window, the rays will not get through. If the climate where you live is primarily cloudy, it’s important to get your recommended amount of vitamin D via other means. Dietary supplements are also an excellent way of obtaining vitamin D. Supplements come in two forms: vitamin D3 (cholecalciferol), which is identical to the form your body makes when exposed to sunlight, and vitamin D2 (ergocalciferol), which differs slightly from D3 in its chemical side-chain structure. There’s some evidence that vitamin D3 increases and maintains overall levels slightly better than vitamin D2.Side Effects of a Vitamin D DeficiencyVitamin D deficiency occurs when you don’t adequately absorb the nutrient or when your kidneys can’t convert the nutrient to its active form. This deficiency can result in medical conditions, two of which are called rickets and osteomalacia. Photo Courtesy: RealPeopleGroup/E+/Getty Images Rickets, a disease characterized by a failure of bone tissues to get enough minerals, can result in abnormal, soft bones and skeletal deformities. It’s most common in children. Fortunately, it isn’t permanent, and kids can consume as few as 1 to 3 teaspoons of cod liver oil a day to reverse the condition. With the help of fortified foods today, rickets is almost obsolete in the United States. Osteomalacia, characterized by soft and weak bones, is usually present in adults. It’s commonly treated with an intense regimen of vitamin D replacement under the care of a physician.Vitamin D and Other Health ConditionsVitamin D deficiency has been linked to cardiovascular disease, and people with lower levels of vitamin D appear to be at an increased risk of having a heart attack or stroke. However, the exact relationship isn’t clear, and there appears to be no benefit to cardiovascular risk in taking a vitamin D supplement. Photo Courtesy: PixelsEffect/E+/Getty Images Research is also ongoing to find if there’s a link between vitamin D and multiple sclerosis (MS). It appears that vitamin D deficiency is linked to the development of MS, and people with MS and higher levels of vitamin D appear to have reduced disease activity. Low vitamin D has been linked to an increased risk of contracting respiratory illnesses such as influenza A. It appears that people with low vitamin D levels are at greater risk of severe novel coronavirus (COVID-19) infection. It’s not clear yet if routine vitamin D supplementation would reduce this risk. Because vitamin D is a fat-soluble substance, it can stay in your body for several days. Thus, vitamin D poisoning is possible if you supplement too much vitamin D over a period of a few months. Symptoms of vitamin D overdose include dehydration, vomiting, decreased appetite, irritability, constipation and fatigue. If left unaddressed, vitamin D poisoning can lead to anorexia, over-calcification of the bones and internal organs, kidney stones and hypertension (high blood pressure). It’s important to note that vitamin D poisoning usually only occurs with excessive intake of dietary supplements. It’s highly unlikely to occur as a result of normal dietary intake and sun exposure.Daily Dosage RecommendationsThe recommended dietary allowances for vitamin D vary depending on your age and other health and life circumstances, such as pregnancy. For infants under 12 months, the recommended intake is 400 international units (IU) or 10 micrograms (mcg). For individuals under 70 years old, the recommended intake is 600IU (15mcg). For individuals over 70 years old, the intake increases to 800IU (20mcg). Photo Courtesy: katleho Seisa/E+/Getty Images If you have a pre-existing medical condition or other medical concerns, it’s best to talk to a healthcare professional about determining your recommended dietary allowance for vitamin D. This way, you can be sure the vitamin doesn’t interact negatively with your condition or medication. Resource Links: 20D%20deficiency.pdf MORE FROM SYMPTOMFIND.COM
